PROPOSED FALSE CLAIMS ACT DISCLOSURE

Regarding UAP-Related Activities, Alleged Misclassification, Congressional Reporting, and Ongoing Observable Aerial Phenomena

By Lisa Miller
Boone, North Carolina

Reporting Period: December 3, 2024 – June 21, 2026

***NOTE:** *The observations, documentation, and evidence collection described in this report remain ongoing. Events occurring after the reporting period are not included in this timeline except where specifically noted.*

IMPORTANT CLARIFICATION REGARDING TERMINOLOGY

At the time this report was written and the underlying notes were recorded, I used the term "drone" as a general descriptor for the unmanned aircraft I observed. Since completing the report, I have learned that the term "drone" is commonly understood to refer to multirotor (quadcopter-type) unmanned aircraft.

To clarify, I did not observe quadcopters.

Throughout this report, references to "drones" should be understood to refer to fixed-wing unmanned aircraft, which I presently believe are more accurately described as delta-wing UAVs (Unmanned Aerial Vehicles) or UAS (Unmanned Aircraft Systems).

Based on my observations, these aircraft appeared to range from approximately 4 to 8 feet in wingspan, depending on the individual aircraft observed. This clarification updates only the terminology used in the report. It does not alter the underlying observations, dates, photographs, videos, or timeline of events.
